

Resetting forgotten password

1. Make a bootable Windows USB
2. Restart your PC and Boot from USB Windows system
3. On the windows installation window, choose Language and Click Next
4. Press Shift+F10 Keys to Open command prompt (OR Shift+Fn+F10)
5. Go to System **root** directory - e.g cd C:
6. Go to the Windows/System32 - cd Windows/System32
7. Execute "rename Utilman.exe Utilman.exe.bak"
8. Execute "copy cmd.exe Utilman.exe"
9. Cancel Installation the Reboot
10. Click on the utility icon/Ease of access (next to the shutdown icon in Windows sign in page)
11. A cmd prompt should have started with system rights, within this cmd prompt, execute "net user <YOUR_USERNAME> <NEW_PASSWORD>"
12. Exit prompt Login with new user name and password
13. Boot again with USB to delete Utilman.exe and then rename Utilman.exe.bak to Utilman.exe

Adding a new user

You can use the steps in "resetting forgotten password" to access command prompt (cmd) in case you cannot log into the pc or run cmd as administrator(basically open cmd with elevated privileges) to create a user other than your own.

1. Open cmd.
2. Execute "net user <newusername> <password> /add"
3. Next, execute "net user <newusername> /active:yes"
4. Exit cmd.
5. You can now log in to your new user.
